Intent	Subject Concepts (Substantive knowledge) 	5 concepts areas: 1) Number 2) Algebra 3) Geometry & Measure 4) Statistics & Probability Ratio & Proportion	<p>Equations and Inequalities 9</p> <ul style="list-style-type: none"> Quadratic Equations Completing The Square Simultaneous Equations <p>Linear Inequalities</p>	<p>Prior Knowledge:</p> <ul style="list-style-type: none"> Understand the \geq and \leq symbols. Substitute into, solve and rearrange linear equations. Factorise simple quadratic expressions. Recognise the equation of a circle. <p>Takeaway Learning:</p> <ul style="list-style-type: none"> Find the roots of quadratic functions. Rearrange and solve simple quadratic equations. Solve more complex quadratic equations. Use the quadratic formula to solve a quadratic equation. Complete the square for a quadratic expression. Solve quadratic equations by completing the square. Solve simple simultaneous equations. Solve simultaneous equations for real-life situations. Use simultaneous equations to find the equation of a straight line. Solve linear simultaneous equations where both equations are multiplied. Interpret real-life situations involving two unknowns and solve them. Solve simultaneous equations with one quadratic equation. Use real-life situations to construct quadratic and linear equations and solve them. <p>Solve inequalities and show the solution on a number line and using set notation.</p>	<p>Probability 10</p> <ul style="list-style-type: none"> Combined Events Mutually Exclusive Events Experimental Probability Independent Events Tree Diagrams Conditional Probability Venn Diagrams Set Notation 	<p>Prior Knowledge:</p> <ul style="list-style-type: none"> Understand that a probability is a number between 0 and 1, and distinguish between events which are impossible, unlikely, even chance, likely, and certain to occur. Mark events and/or probabilities on a probability scale of 0 to 1. Know how to add and multiply fractions and decimals. Express one number as a fraction of another. List all outcomes for a single event systematically. Make predictions from experimental data. Complete a two-way table. <p>Takeaway Learning:</p> <ul style="list-style-type: none"> Use the product rule for finding the number of outcomes for two or more events. List all the possible outcomes of two events in a sample space diagram. Identify mutually exclusive outcomes and events. Find the probabilities of mutually exclusive outcomes and events. Find the probability of an event not happening. Work out the expected results for experimental and theoretical probabilities. Compare real results with theoretical expected values to see if a game is fair. Draw and use frequency trees. Calculate probabilities of repeated events. Draw and use probability tree diagrams. Decide if two events are independent. Draw and use tree diagrams to calculate conditional probability. Draw and use tree diagrams without replacement. Use two-way tables to calculate conditional probability. Use Venn diagrams to calculate conditional probability. <p>Use set notation.</p>	<p>Multiplicative Reasoning 11</p> <ul style="list-style-type: none"> Growth and decay Compound Measures Ratio and Proportion 	<p>Prior Knowledge:</p> <ul style="list-style-type: none"> Find a percentage of an amount and relate percentages to decimals. Rearrange equations and use these to solve problems. Know speed = distance/time, density = mass/volume. Convert between metric units. Solve simple direct and indirect proportion problems, including currency conversion. <p>Takeaway Learning:</p> <ul style="list-style-type: none"> Find an amount after repeated percentage changes. Solve growth and decay problems. Calculate rates. Convert between metric speed measures. Use a formula to calculate speed and acceleration. Solve problems involving compound measures. Use relationships involving ratio. Use direct and indirect proportion.
				<p>Prior Knowledge:</p> <ul style="list-style-type: none"> 		<p>Prior Knowledge:</p> <ul style="list-style-type: none"> 	<p>Similarity and Congruence 12</p> <ul style="list-style-type: none"> Congruence Proof Similarity 	<p>Prior Knowledge:</p> <ul style="list-style-type: none"> Recognise and enlarge shapes and calculate scale factors. Know how to calculate area and volume in various metric measures. Measure lines and angles, and use compasses, ruler and protractor to construct standard constructions. Recognise congruent shapes. Know basic angle facts.

			Takeaway Learning: •		Takeaway Learning: •		Takeaway Learning: • Show that two triangles are congruent. • Know the conditions of congruence. • Prove shapes are congruent. • Solve problems involving congruence. • Use the ratio of corresponding sides to work out scale factors. • Find missing lengths on similar shapes. • Use similar triangles to work out lengths in real life. • Use the link between linear scale factor and area scale factor to solve problems. • Use the link between scale factors for length, area and volume to solve problems.
	Disciplinary Knowledge		<u>Equations and Inequalities 9</u> Algebra progression map		<u>Probability 10</u> Probability progression map		<u>Multiplicative Reasoning 11</u> Fractions, decimals and percentages progression map <u>Similarity and Congruence 12</u> Position and direction progression map
Implementation	Common Misconceptions		<u>Equations and Inequalities 9</u> • Not working inversely to solve equations • Misapplying completing the square • Factorising quadratics incorrectly • Once pupils know how to factorise a quadratic expression of the form $x^2 + bx + c$ they might overcomplicate the simpler case of factorising an expression such as $3x^2 + 6x \equiv (3x + 0)(x + 2)$ • Some pupils may think that $(x + a)^2 \equiv x^2 + a^2$ • Some pupils may apply the 'rules of factorising' quadratics of the form $x^2 + bx + c$ to quadratics of the form $ax^2 + bx + c$; e.g. $2x^2 + 7x + 10 \equiv (2x + 5)(x + 2)$ because $2 \times 5 = 10$ and $2 + 5 = 7$.	<u>Probability 10</u> • Not understanding words mutually exclusive • Not reducing denominator for conditional probability • Not setting out tree diagram correctly • When constructing a Venn diagrams for a given situation, some pupils may struggle to distinguish between elements that are included in the intersection of both regions or only in one of the regions • Some pupils may muddle the conditions for adding and multiplying probabilities • Some pupils may add the denominators when adding fractions •	<u>Multiplicative Reasoning 11</u> • Not converting to same unit to solve DST problem. • Incorrect multipliers used • Mixing up acceleration and distance calculation on a graph • Some pupils may incorrectly think $0.111111... = \frac{1}{11}$ • Some pupils may think that an the amount created by increasing a quantity by 5% repeated four times is the same as increasing the quantity by 5% and multiplying that amount by 4. • Some pupils may think the percentage multiplier for a 20% increase (or decrease) is 0.2 <u>Similarity and Congruence 12</u> • Unable to recall all 4 conditions of congruence • Misapplying link between LSF and ASF/VSF • Setting out proof of congruence in unclear manner • Some pupils may think that the resulting image of an enlargement has to be larger than the original object. • Some pupils may think that the order of transforming an object does not have an effect on the size and position of the final image. • Some pupils may link scale factors and similarity using an additive, rather than multiplicative, relationship.		
	Enabling or Adapting the Curriculum	SEND Students	<u>Equations and Inequalities 9</u> • Number lines in classrooms to support counting • Grouping similar items before introducing the idea of collecting like terms and algebra, x and y • Solving problems with a box indicating missing numbers instead of letters.	<u>Probability 10</u> • Multiplications grids available to support times tables • Number lines in classrooms to support counting • Fraction walls available in lessons • Equivalences overview/chart	<u>Multiplicative Reasoning 11</u> • Multiplications grids available to support times tables • Triangle formulae shared eg DST • Scaffolding worksheets to gradually build to independence • Modelled examples		

		<ul style="list-style-type: none"> • Scaffolding worksheets to gradually build to independence • Modelled examples • Sentence starters and writing frames 	<ul style="list-style-type: none"> • Scaffolding worksheets to gradually build to independence • Modelled examples • Sentence starters and writing frames 	<ul style="list-style-type: none"> • Scaffolding worksheets to gradually build to independence • Modelled examples • Sentence starters and writing frames 	<ul style="list-style-type: none"> • Sentence starters and writing frames <u>Similarity and Congruence 12</u> • 4 conditions of congruence shared with examples • Multiplications grids available to support times tables, which in turn will help with scale factors • Scaffolding worksheets to gradually build to independence • Modelled examples • Sentence starters and writing frames
	Disadvantaged Students	<ul style="list-style-type: none"> • Scaffolding worksheets to gradually build to independence • Modelled examples • Sentence starters and writing frames when answering problem solving questions • Necessary equipment to support in lessons 	<ul style="list-style-type: none"> • Scaffolding worksheets to gradually build to independence • Modelled examples • Sentence starters and writing frames when answering problem solving questions • Necessary equipment to support in lessons 	<ul style="list-style-type: none"> • Scaffolding worksheets to gradually build to independence • Modelled examples • Sentence starters and writing frames when answering problem solving questions • Necessary equipment to support in lessons 	<ul style="list-style-type: none"> • Scaffolding worksheets to gradually build to independence • Modelled examples • Sentence starters and writing frames when answering problem solving questions • Necessary equipment to support in lessons
		<ul style="list-style-type: none"> • Show me a pair of simultaneous equations with a solution $x = 4, y = -2$. And another. And another ... • Convince me $x + 2y = 11, 3x + 4y = 18$ can be solved using substitution and using elimination. Which method is best in this case? <p>Always/ Sometimes/ Never: Solving a pair of simultaneous equations using elimination is more efficient than using substitution</p>	<ul style="list-style-type: none"> • Show me an example of a Venn diagram. And another. And another • Show me an example of a two-way table. And another. And another <p>Always / Sometimes / Never: All the regions of a Venn diagram must be populated</p>		<p><u>Multiplicative Reasoning 11</u></p> <ul style="list-style-type: none"> • Show me a fraction that can be expressed as a recurring decimal. And another. And another ... • Always/Sometime/Never: If the denominator is odd, the fraction can ve expressed as a recurring decimal • Convince me $\frac{1}{7}$ can be expressed as a recurring decimal • Convince me $0.999999999 \dots = 1$ <p>Kenny thinks that the interest gained when £100 is increased 20% per annum for 4 years can be calculated by multiplying £100 by 2.0736. Do you agree with Kenny? Explain your answer.</p> <p><u>Similarity and Congruence 12</u></p> <ul style="list-style-type: none"> • Show me a pair of similar shapes. And another. And another ... • Always/ Sometimes/ Never: The resulting image of an enlargement is larger than the original object <p>Kenny thinks rotating an object 90° about the origin followed by a reflection in the y-axis has the same effect as reflecting an object in the y-axis followed by a rotation 90° about the origin. Do you agree with Kenny? Explain your answer.</p>
<p>Literacy/Numeracy Skills</p> 	<p>LITERACY</p> <p>Reading:</p>	<p><u>Equations and Inequalities 9</u></p> <p>Key Words</p> <ul style="list-style-type: none"> • Add and subtract algebraic fractions • Multiply and divide algebraic fractions • Simplify an algebraic fraction • Expand the product of three binomials • Expand the product of two binomials involving surds • Factorise an expression involving the difference of two squares • Factorise a quadratic expression of the form $ax^2 + bx + c$ (a is prime) • Factorise a quadratic expression of the form $ax^2 + bx + c$ (a is composite) 	<p><u>Probability 10</u></p> <p>Key Words</p> <p>Outcome, equally likely outcomes Event, independent event, dependent event Tree diagrams Theoretical probability, experimental probability Random Bias, unbiased, fair Enumerate Set Conditional probability Venn diagram</p>		<p><u>Multiplicative Reasoning 11</u></p> <ul style="list-style-type: none"> • Key Words <p>Fraction Mixed number Top-heavy fraction Percentage change, percentage increase, percentage increase Compound interest, Simple interest Terminating decimal, Recurring decimal (Exponential) growth, decay</p> <p><u>Similarity and Congruence 12</u></p> <ul style="list-style-type: none"> • Key Words <p>Perpendicular bisector Scale Factor</p>

		<ul style="list-style-type: none"> Identify when factorisation of the numerator and/or denominator is needed to simplify an algebraic fraction Simplify an algebraic fraction that involves factorisation Change the subject of a formula when more than two steps are required Change the subject of a formula when the required subject appears twice 		<p>Similar Congruent Invariance Transformation Rotation Reflection Translation Enlargement</p>
	<p>Writing:</p> <p>Writing reasoning with correct punctuation & use of mathematical keywords & symbols. Example of writing fluency in maths:</p> $y = x^2 + 6x + 4$ $y = (x + 3)^2 + 4 - 3^2$ $y = (x + 3)^2 - 5$	<p>Writing reasoning with correct punctuation & use of mathematical keywords & symbols. Example of writing fluency in maths:</p> 		<p>Writing reasoning with correct punctuation & use of mathematical keywords & symbols. Example of writing fluency in maths:</p> $A = 6500(1 + 0.0725)^5$ $A = 6500(1.419)$ $A = \$9223.59$
	<p>Oracy:</p> <p>Incidental language based on ability groups. Example of spoken fluency in maths: There are infinitely many solutions to each equation, but only one solution that satisfies both equations simultaneously.</p>	<p>Incidental language based on ability groups. Example of spoken fluency in maths: A type of diagram that uses overlapping circles to represent the logical relation between specific things.</p>		<p>Incidental language based on ability groups. Example of spoken fluency in maths: Here we can see that a scale factor of 4 was used on both top and bottom. Because the same number was used to multiply both 5 and 7, this is a proportion.</p>
